

Relationship of SWOT Field Programs

Planning SWOT Oceanography Field Programs

NASA planning for Cal/Val during One-Day is advancing through a series of trial deployments off California. These pilot projects are important to assure success of 2021-22 field program.

- Prepare plans for FY21 NASA budget cycle by 1st Quarter CY19 in order to marshal SWOT Project resources plus over-guides for adequate ocean cal/val AND independent science process study.
- Need to work during next six months to entrain broader scientific (*in situ* experiment expertise) and agency (e.g. NSF-PO, NOAA-OOMD) community.
- Proposal teams for NASA, NSF, and NOAA for scientific process study(s) may be a logical outcome of a Fall 2018 planning workshop.
- International collaboration and co-planning very important. May be easier and more effective to plan for parallel (paired) experiments rather than a co-located single experiment?
