

# Recent advances in global hydrology modeling at CNRM, Météo-France

***CTRIP-12D***

***MLake***

***SWOT DA***

---

[S. Munier, M. Lesaffre, S. Sayssset, T. Guinaldot, A. Boone, P. Le Moigne](#)

*SWOT Science Team meeting - Bordeaux, 17-20 June 2019*

# SURFEX-CTRIP hydrological system

- **CTRIP** : CNRM version of the TRIP based river routing system

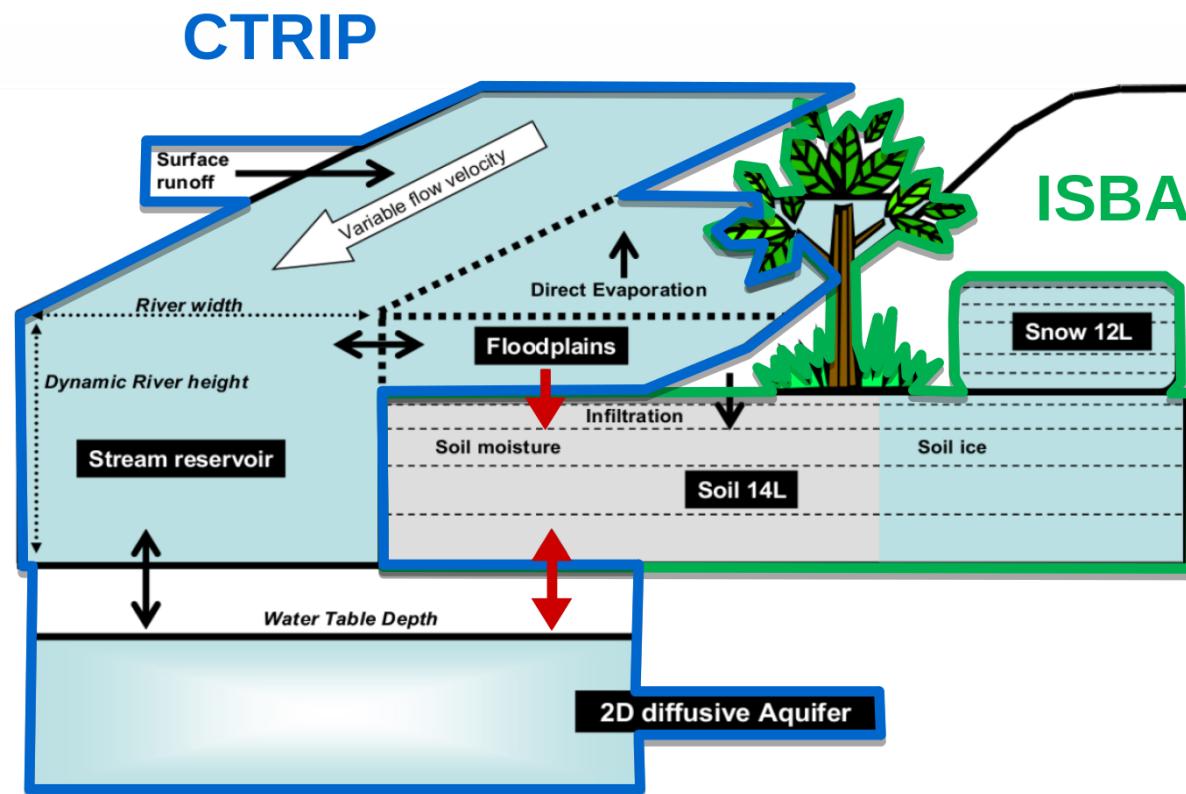

- variable flow velocity
- flooding by river overflow
- aquifers

(Oki and Sud, 1998, Decharme et al., 2019)

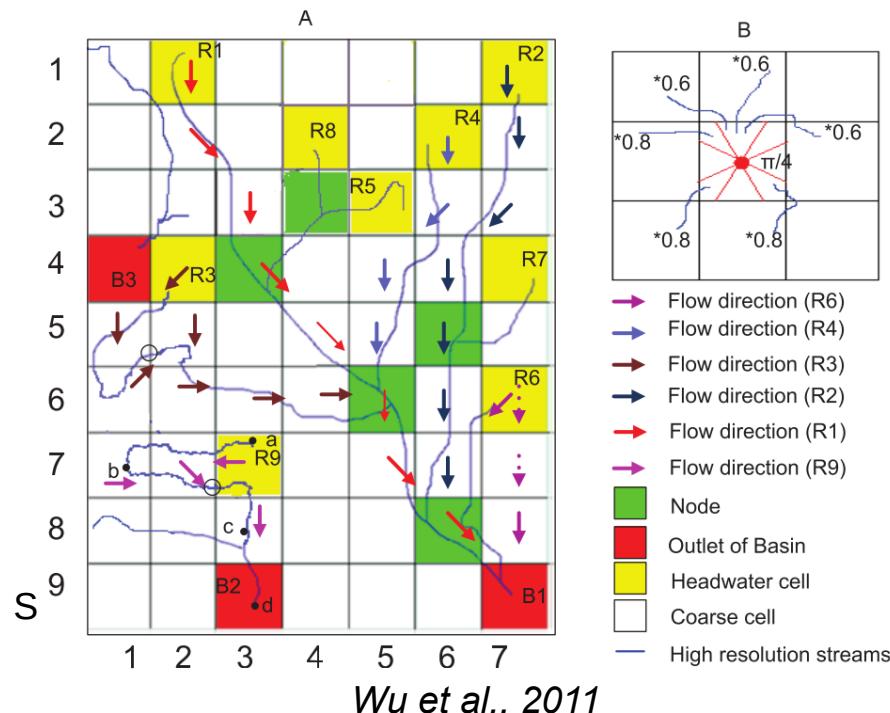

- **ISBA** : simulates the diurnal cycle of:

- water and carbon fluxes
- plant growth
- vegetation variables

(Calvet et al., 1998, 2007, Gibelin et al., 2006)

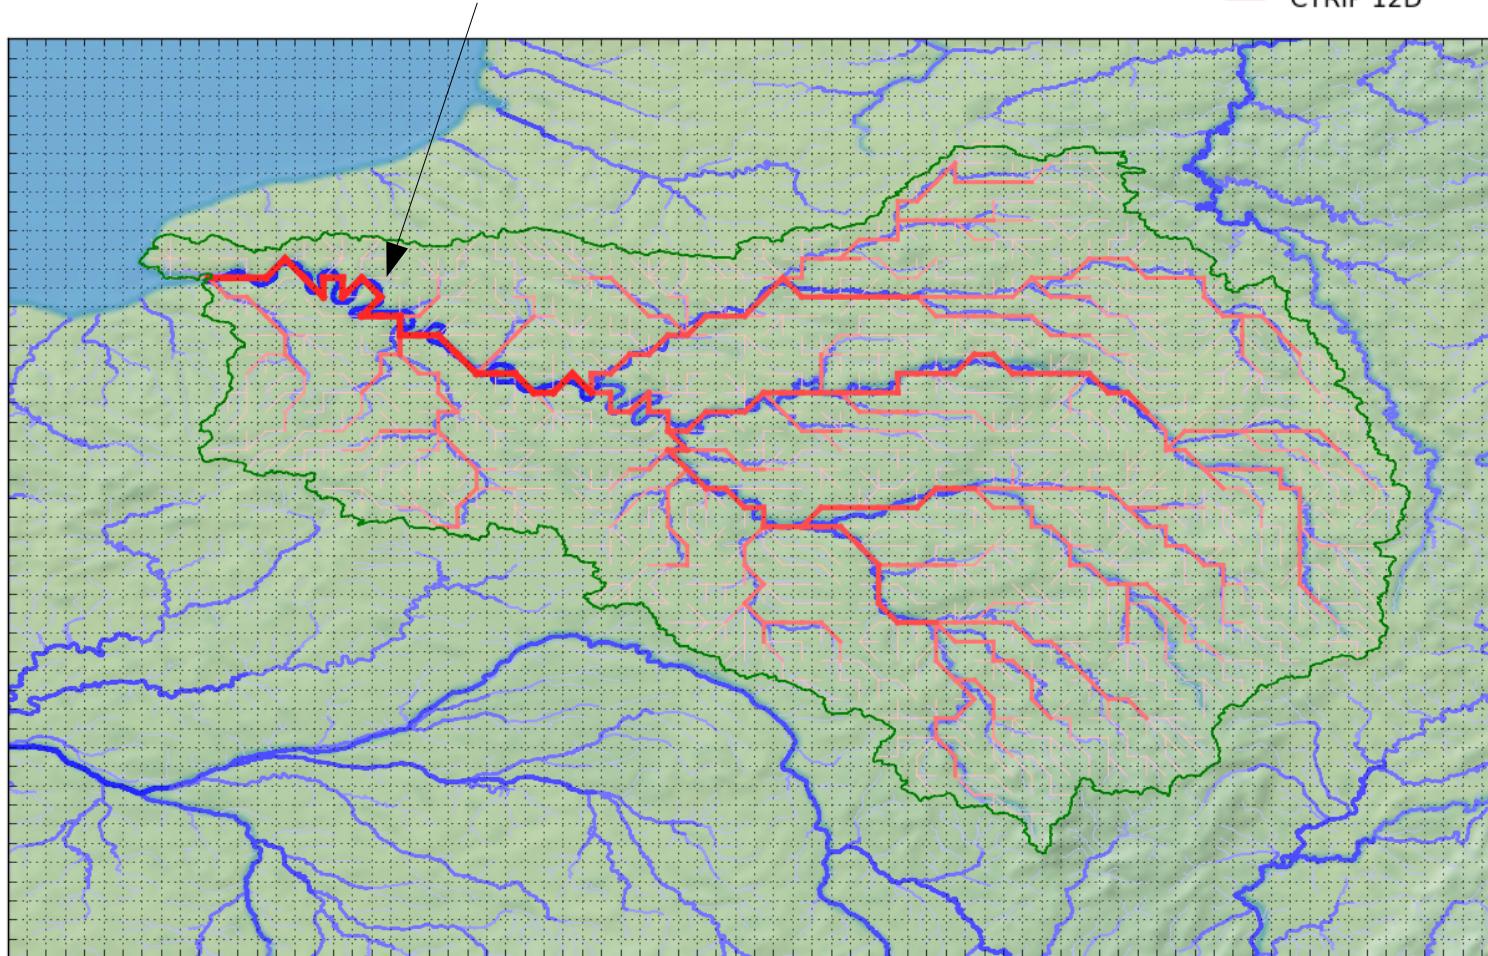

- Upscaling of the river network from MERIT Hydro (Yamazaki et al., 2019)
    - high-accuracy global DEM at 3" resolution (~90 m at the equator)
    - removal of major error components from existing DEMs
  - Hierarchical Dominant River Tracing (DRT, Wu et al., 2011)
    - Extraction and upscaling of flow direction (D8)
    - Major rivers computed first
    - River diversion when necessary
    - Fully automated algorithm (no manual correction)
- river network structure preserved*

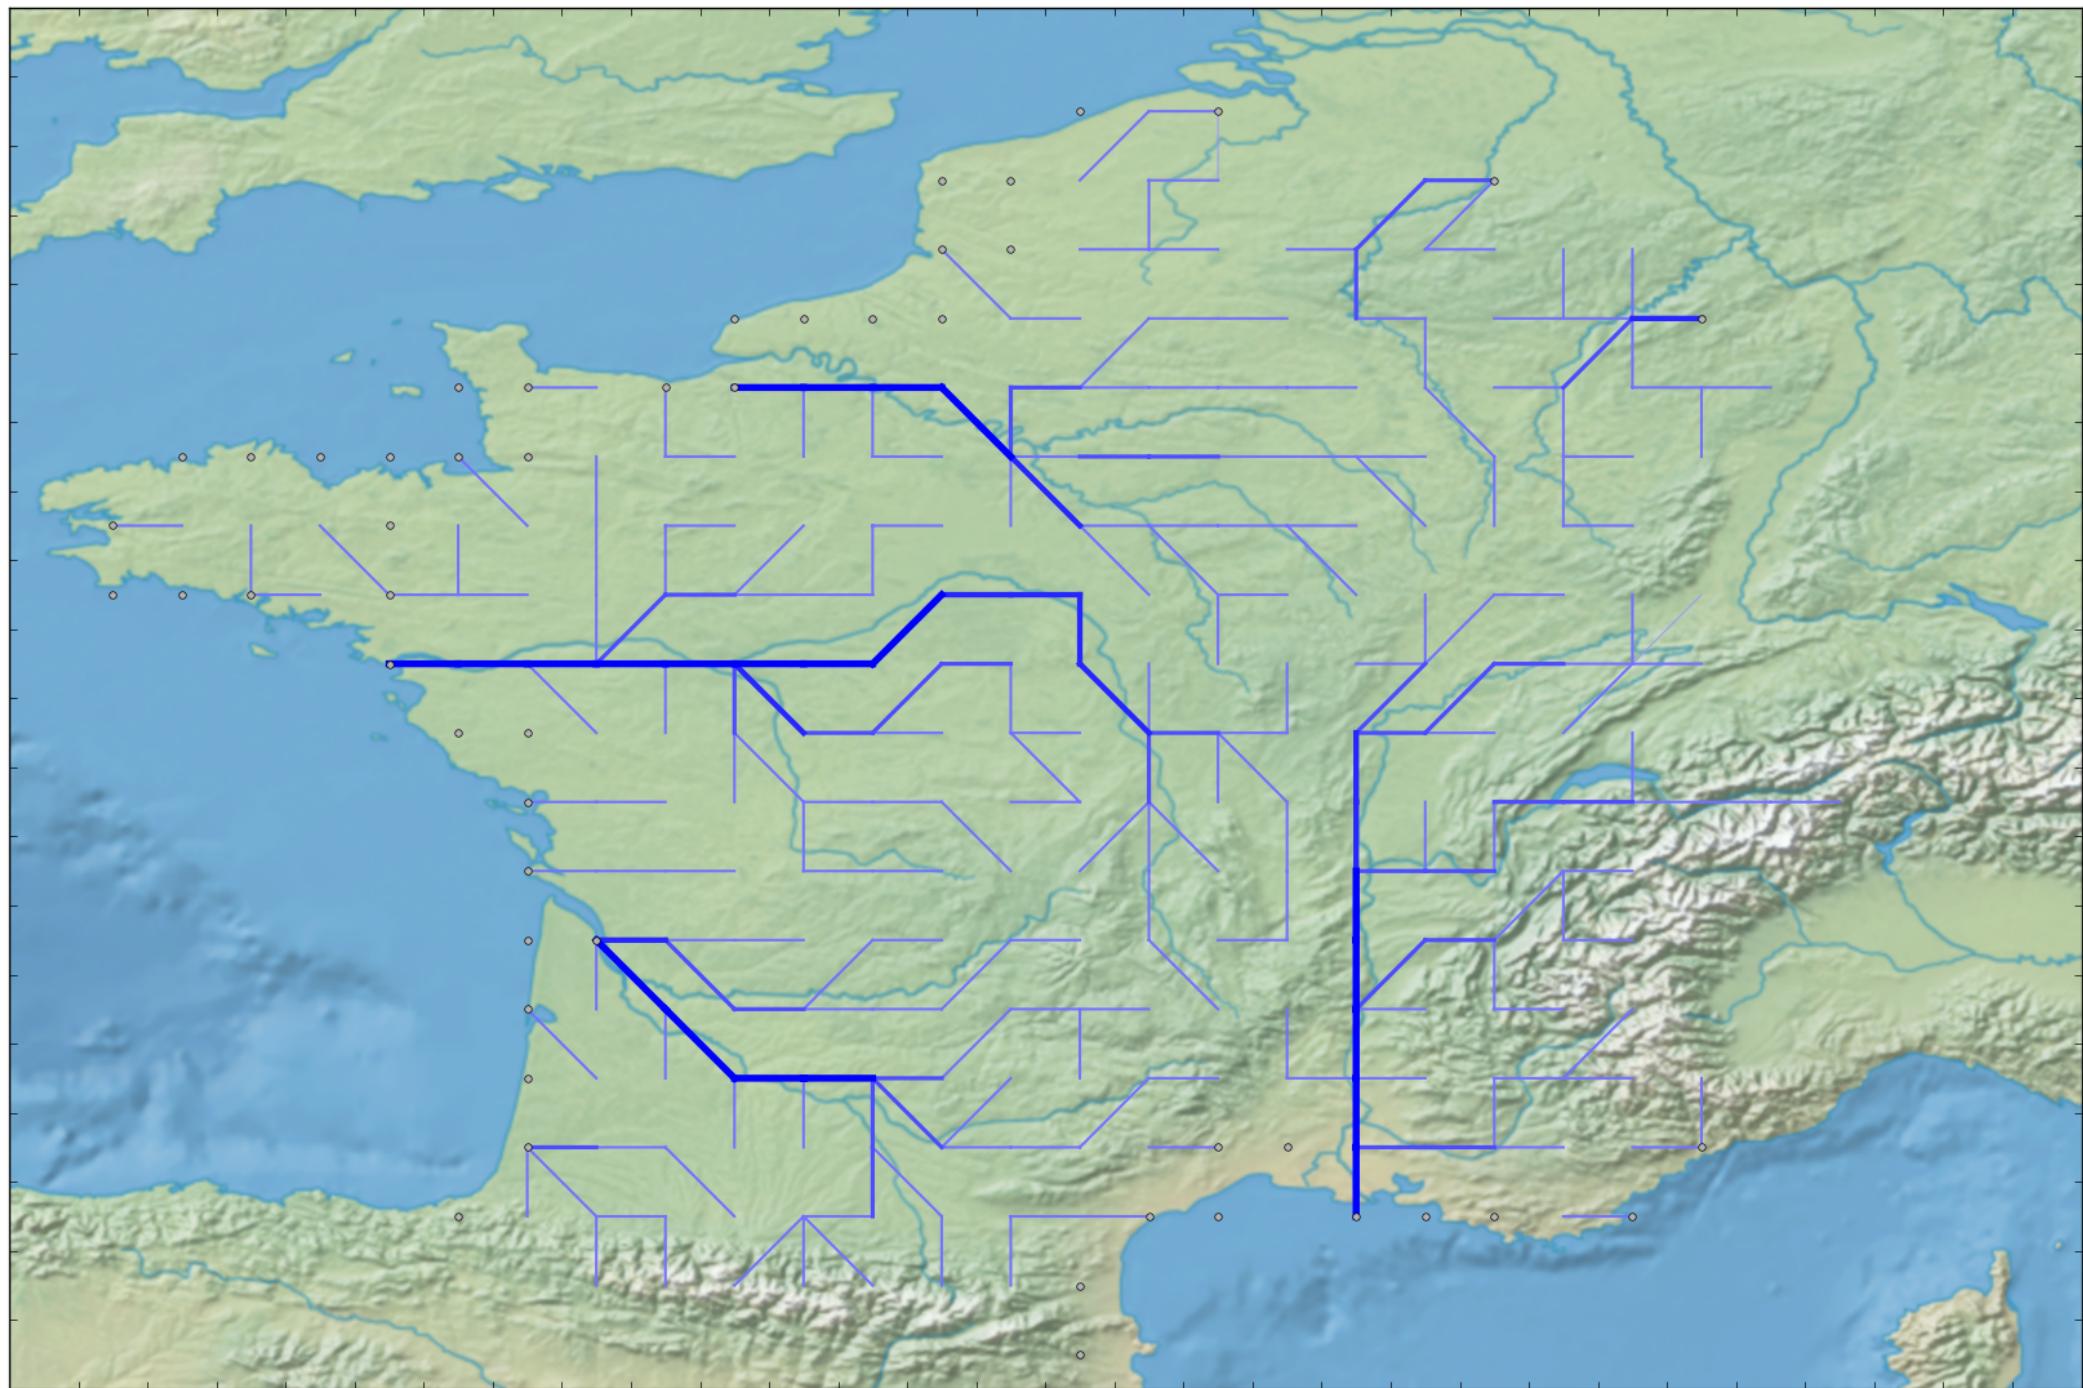

- Example of the Seine River basin

good representation of meanders

- Basin boundary
- MERIT 1200D
- CTRIP 12D

# CTRIP-2D over France

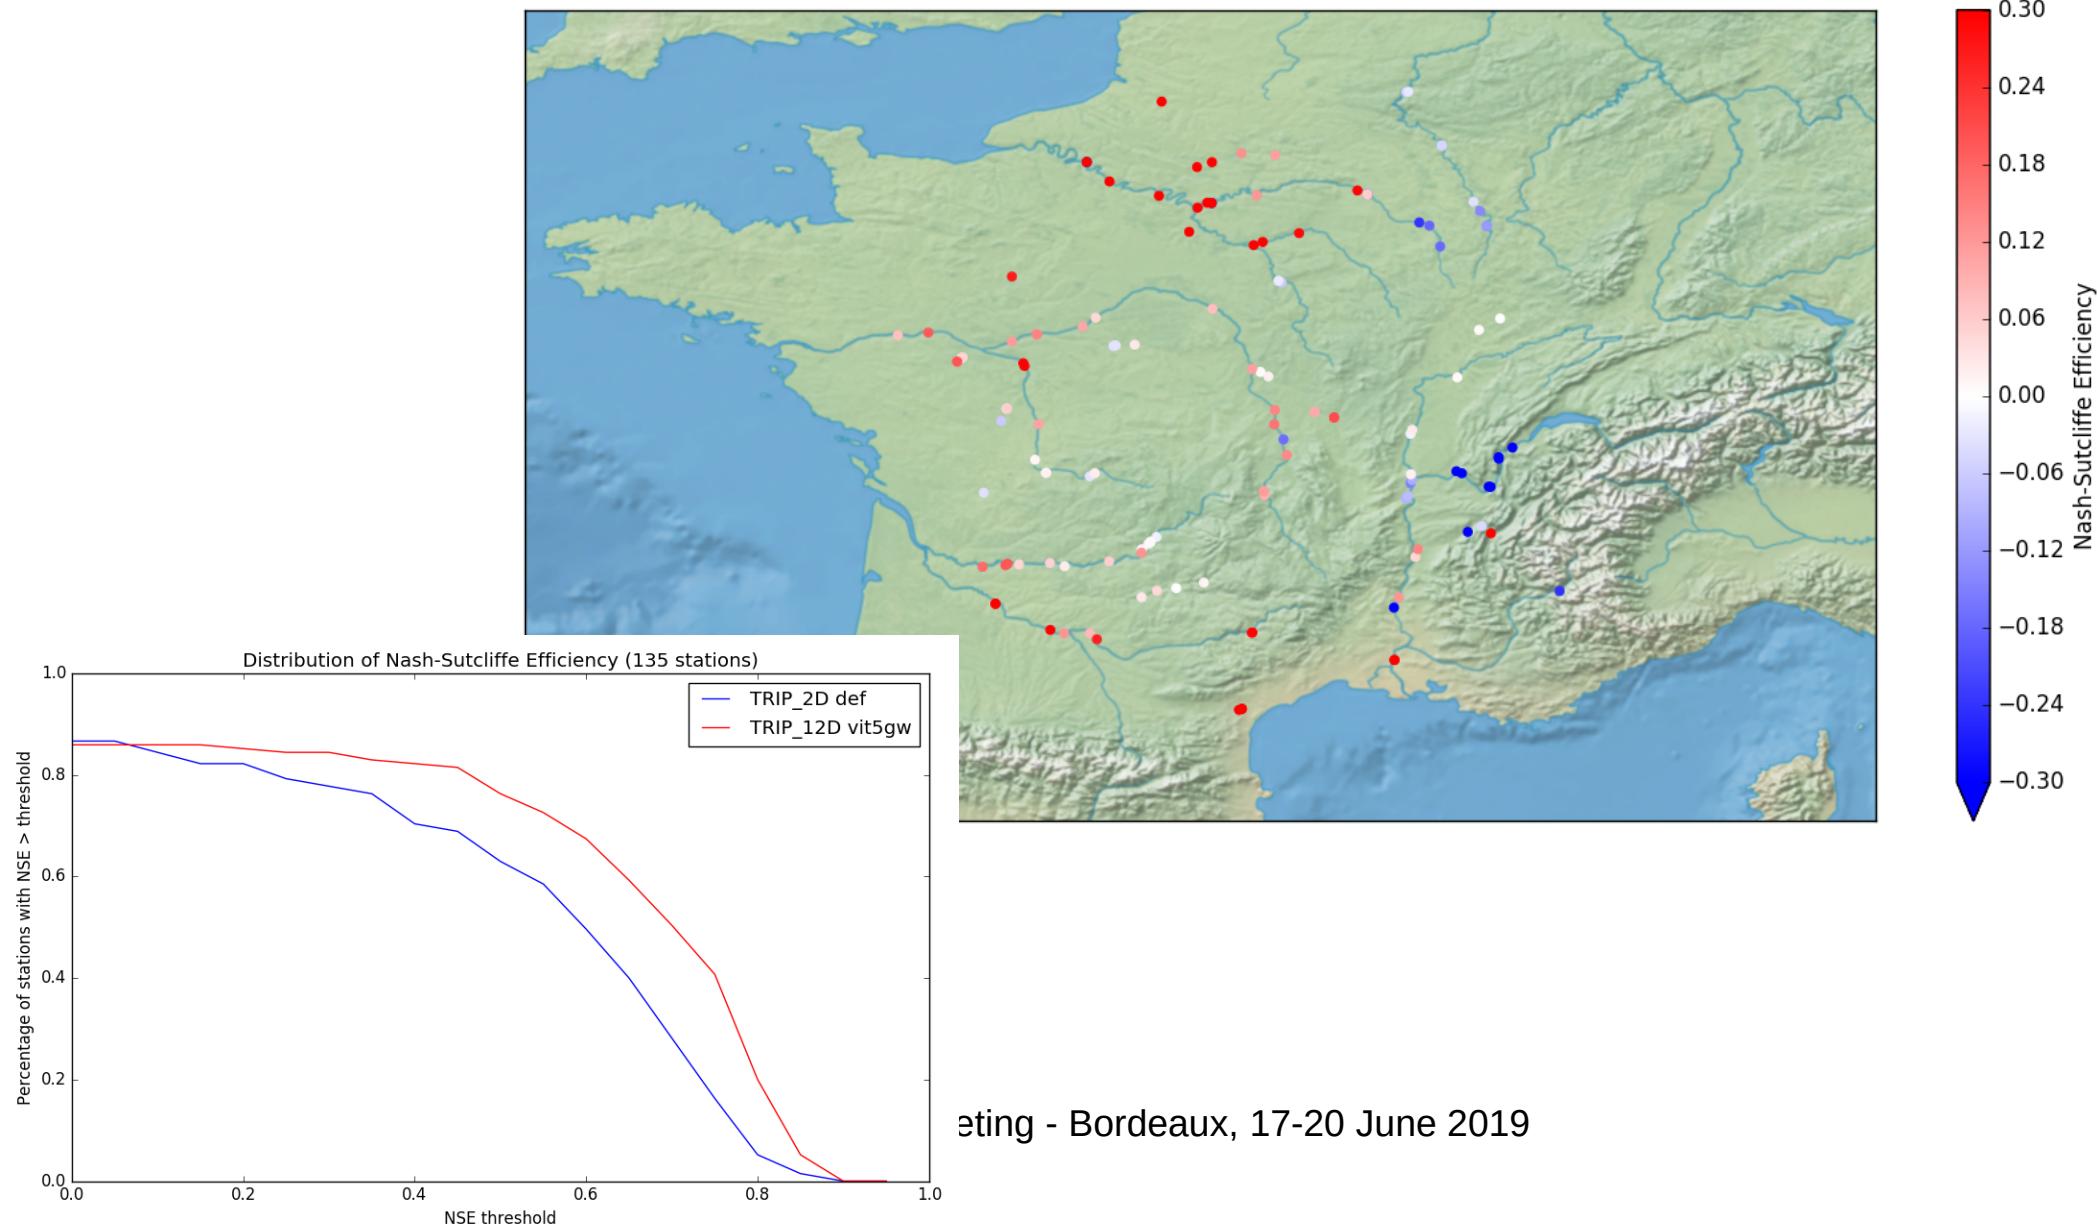

# CTRIP-12D over France

# CTRIP-12D: preliminary results

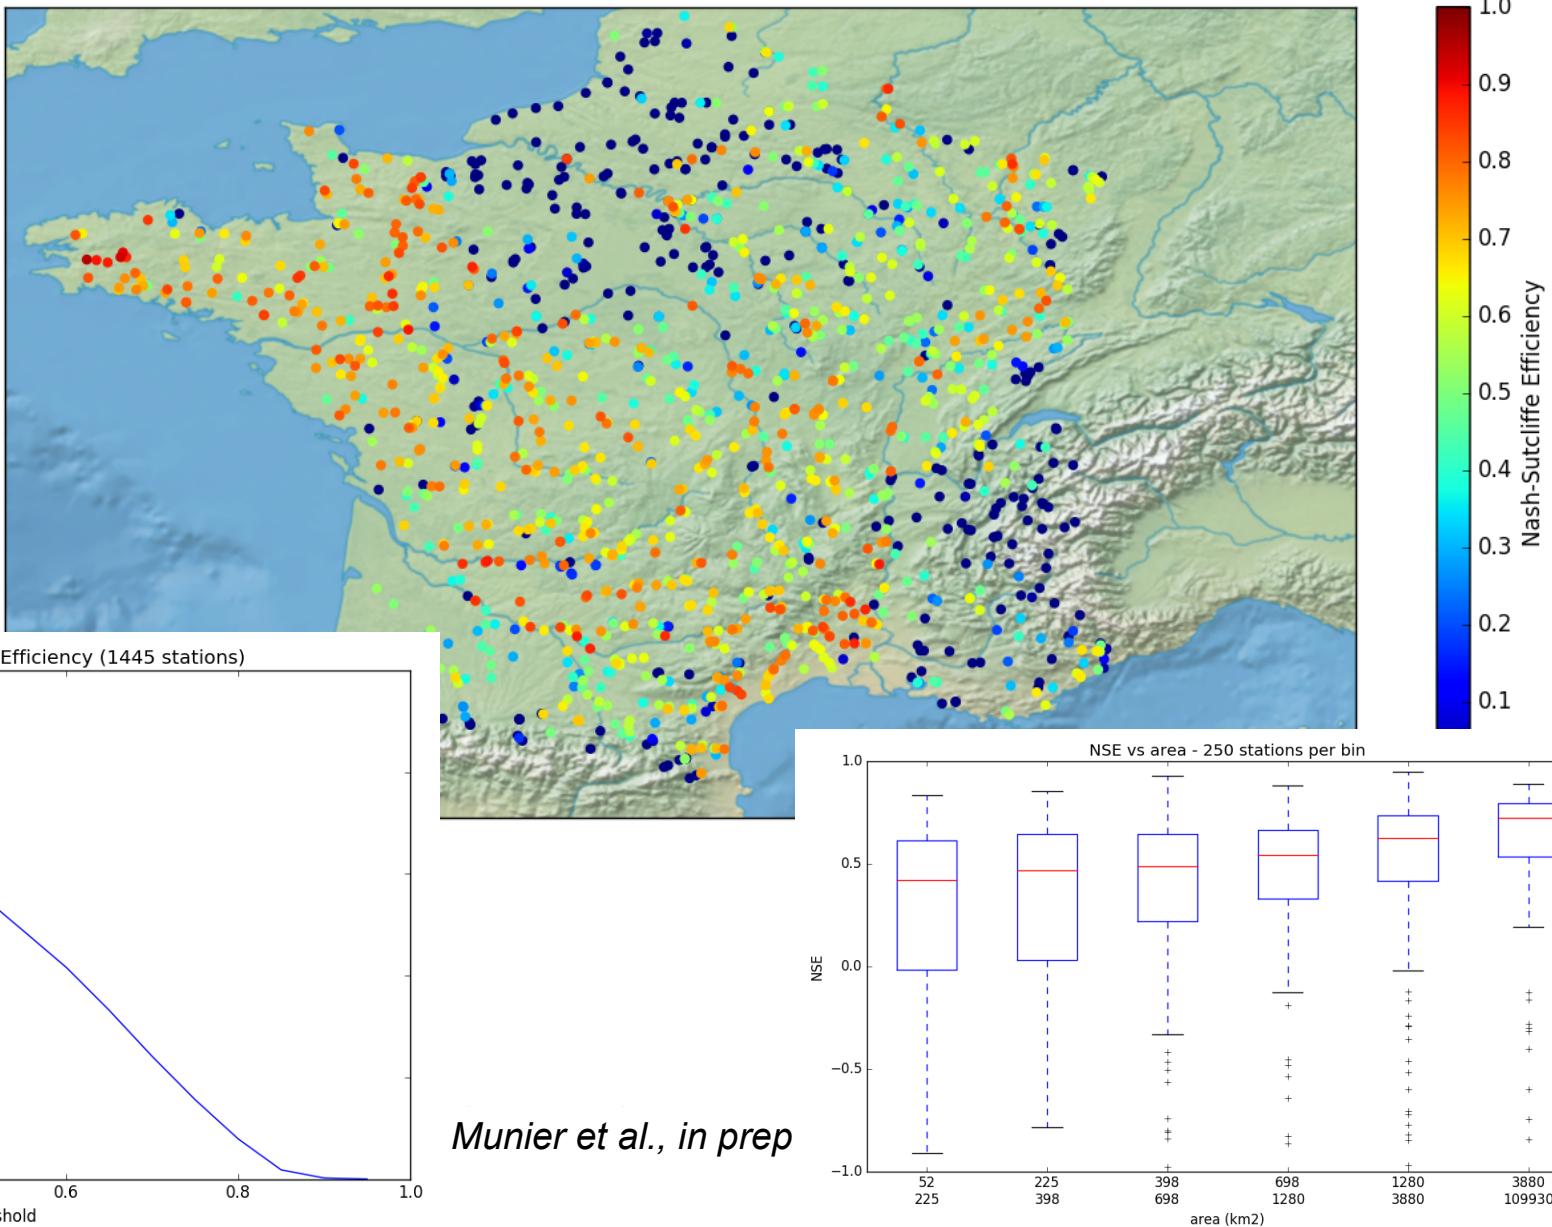

- **CTRIP-12D vs CTRIP-2D: NSE**

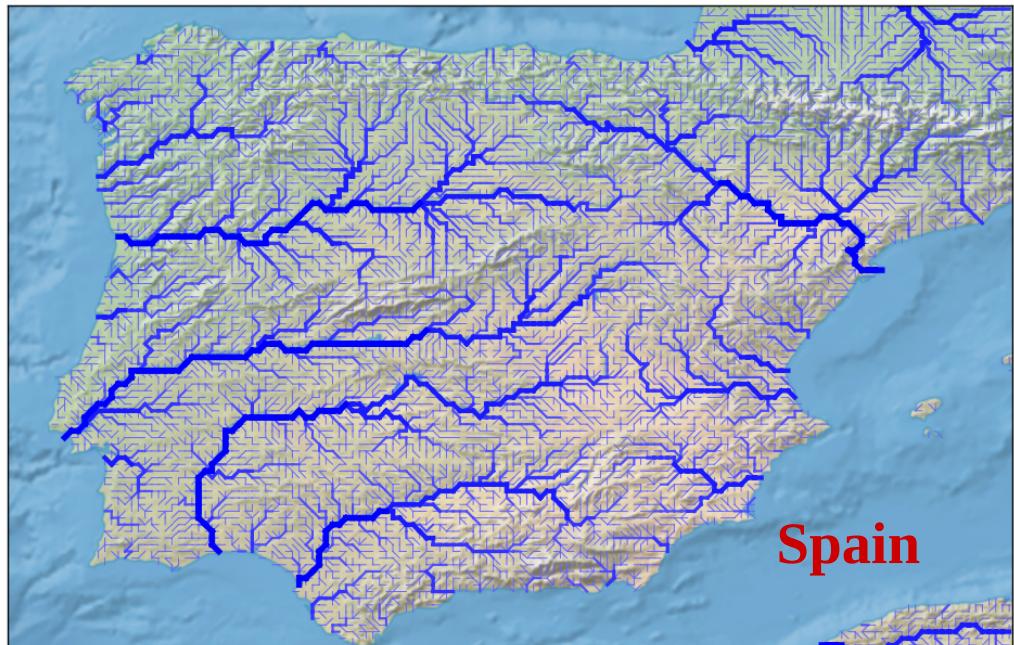

# CTrip-12D: preliminary results

## ■ CTRIP-12D: NSE

# CTRIP-12D: examples

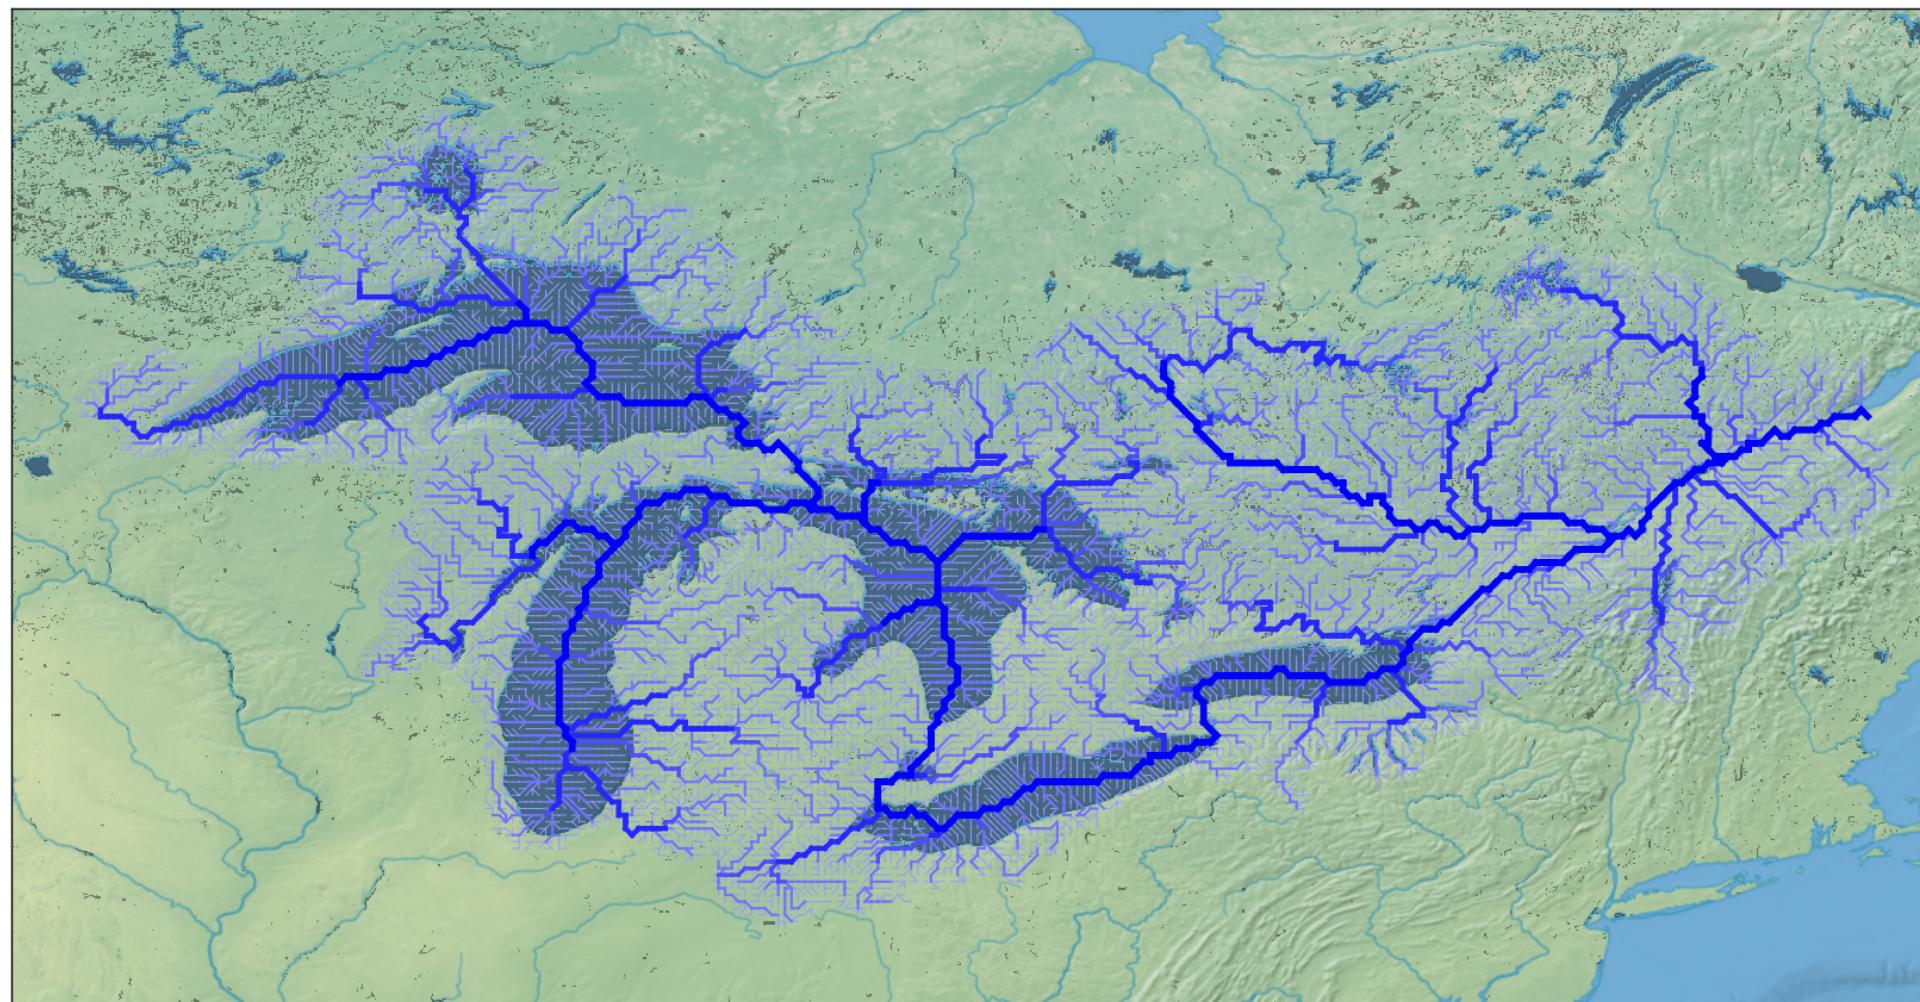

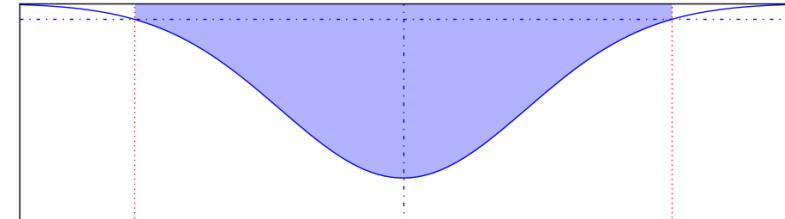

Munier et al., *in prep*

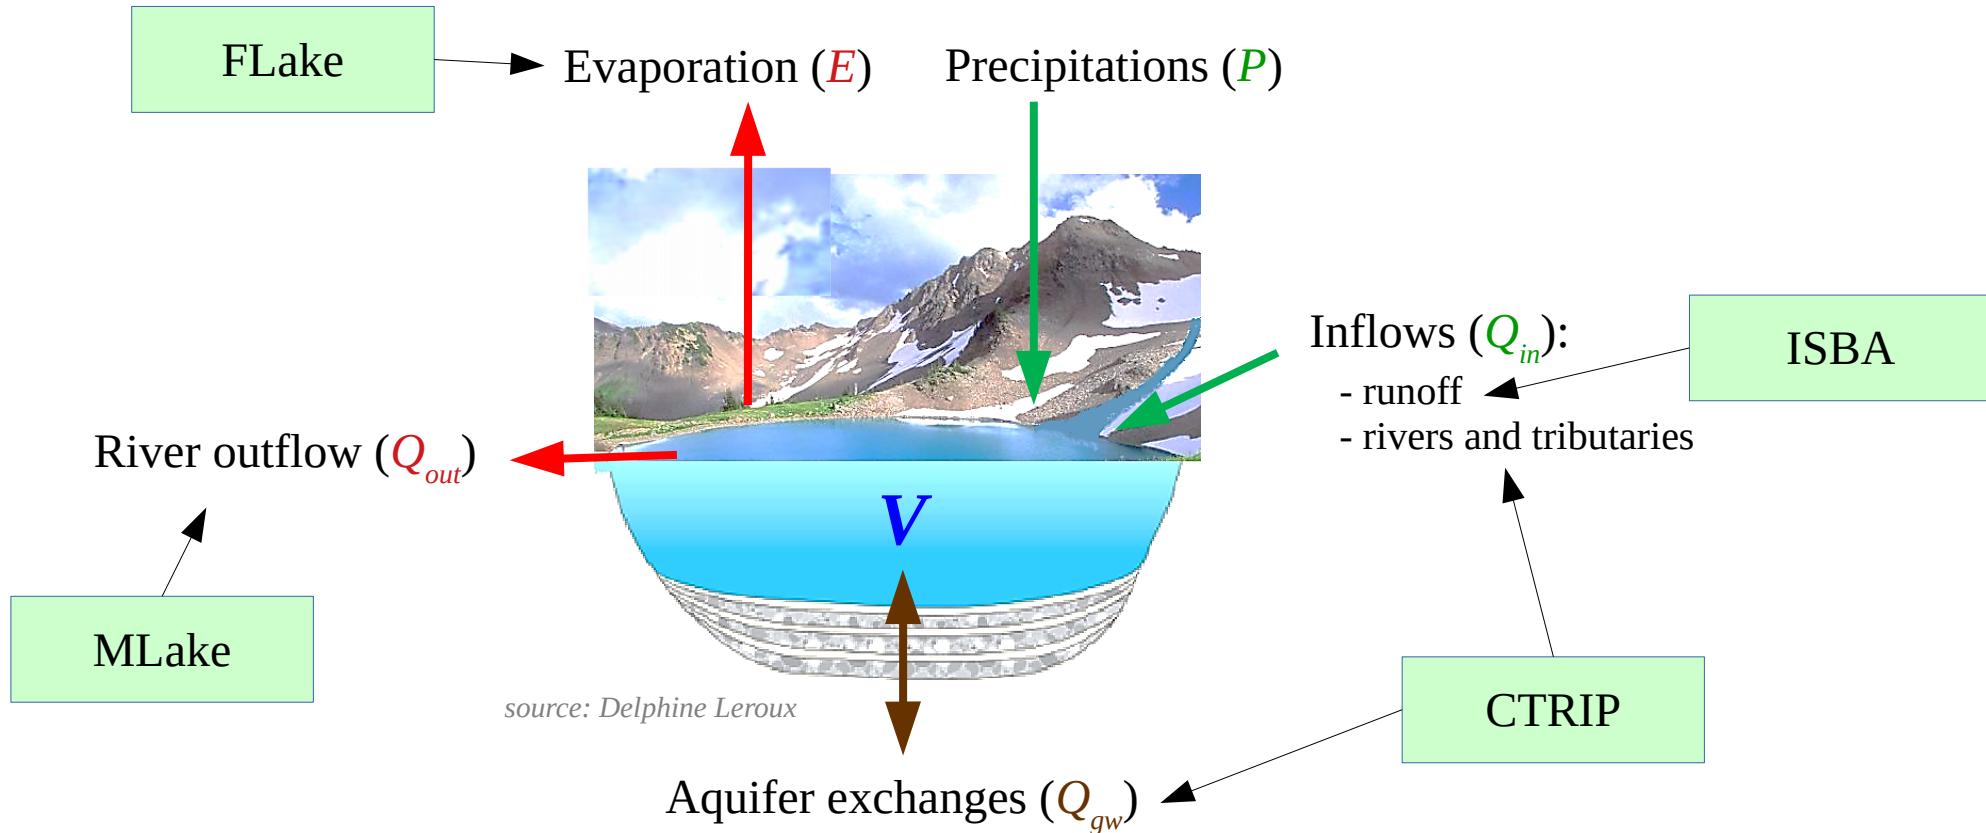

# MLake: Water mass balance in lakes

- Global scale extraction of lakes (localization, area) from ECOCLIMAP-II (1 km resolution)
- Calibration of a Gaussian shape for bathymetry
- Clipping of lake mask over the CTRIP-12D river network

# MLake: Water mass balance in lakes

$$\frac{d \mathbf{V}}{d t} = ( P - E ) * A_{lake} + Q_{in} - Q_{out} + Q_{gw}$$

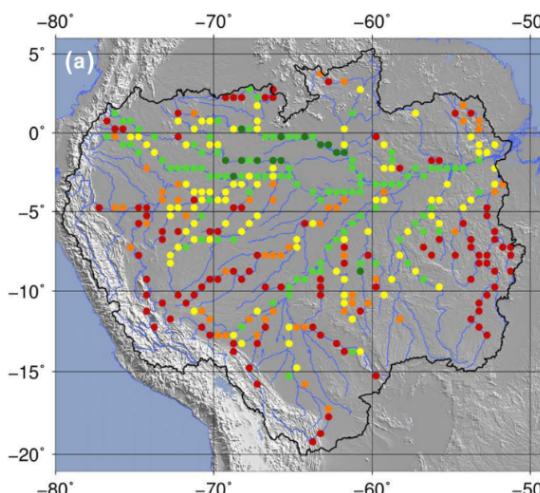

Guinaldo et al., in prep

# SWOT DA within CTRIP

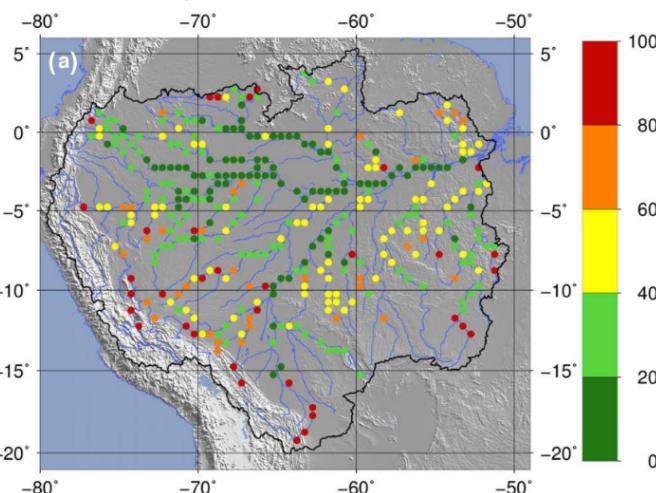

- Based on previous work by Emery et al. (2018, 2019) over the Amazon basin  
Assimilation of ENVISAT observations within CTRIP for parameter estimation or state correction (river storage or discharge)

free run experiment

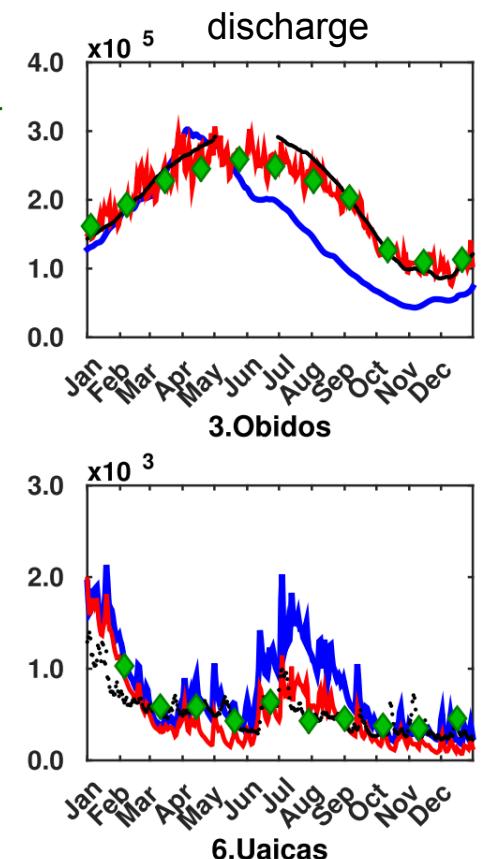

analysis experiment

gauge  
ENVISAT  
free run  
analysis

RMSEn of simulated/analyzed discharge with respect to the ENVISAT

- On-going integration in the SURFEX code (TOSCA project)
  - Freely available from GIT repo
  - Possible extension for case studies over any basin around the world

# Integration of dam-reservoirs

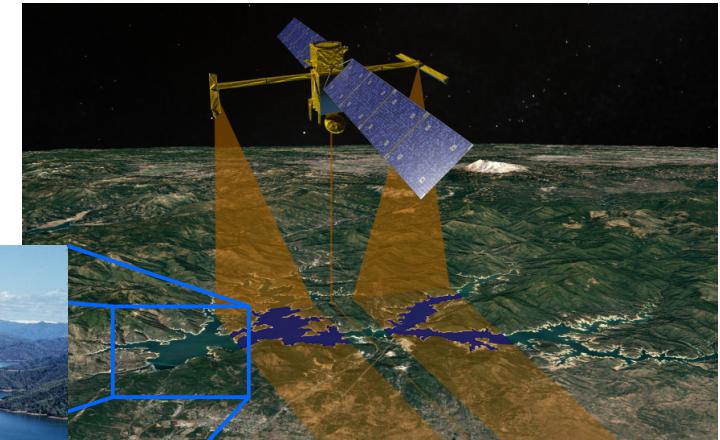

- New PhD starting in October 2019, funded by CNES

**Improved river flow modeling with the integration of dams-reservoirs and the use of the future altimetry SWOT mission**

## Main objective:

Improve our understanding of the impact of anthropization on regional scale water resources

- ▶ New high resolution river network
- ▶ Development of a dam-reservoir model
- ▶ Reservoir management and dam releases
  - Hydropower
  - Irrigation
  - Low-flow sustainability
  - Flood control
- ▶ Assimilation of satellite observations
  - Characterization of reservoirs
  - Model parameter calibration
