Key Issues Going Forward

Develop a 1-page cheat-sheet (or github) with the following items:

- MSS products currently available on L2 and L3 data.

- Best practices for removing the MSS from SWOT data.

- Instructions on how to replace the MSS with updates.

- Number of SWOT repeats needed to reduce the MSS variance (e.g., 6 mo -18%; 12 mo. - 9%; 1.5 yr – 5% and 3 yr - 2%).

Work with project to reduce the errror at the edge of the L2 – L3 products.

How do we deal with large scale (> 500 km) MSS(t)? Does it matter for small-scale SWOT analysis?
